

1. Open MongoDB Compass (download from <https://www.mongodb.com/products/compass>)
2. Open it and make a new connection. Use the connection string from MongoDB server

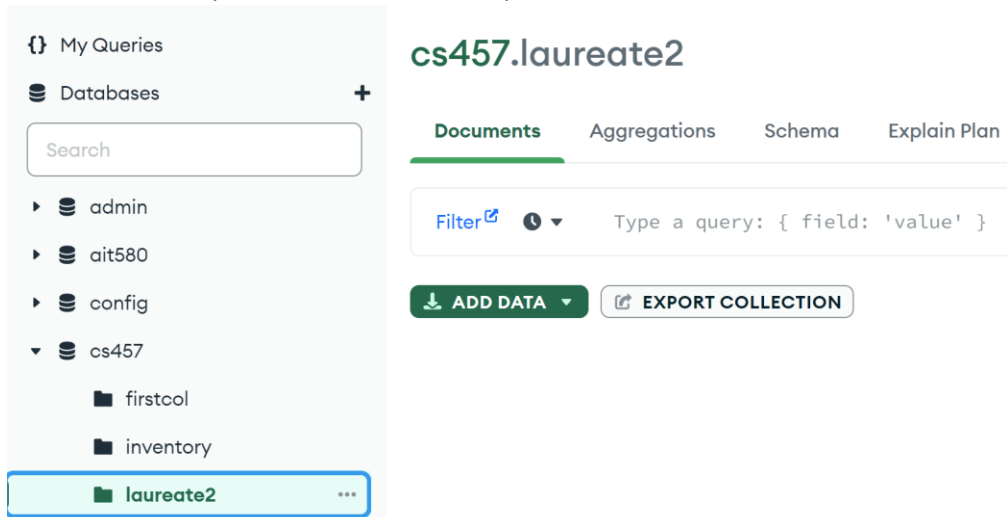

3. If connected successfully, you will see your databases.

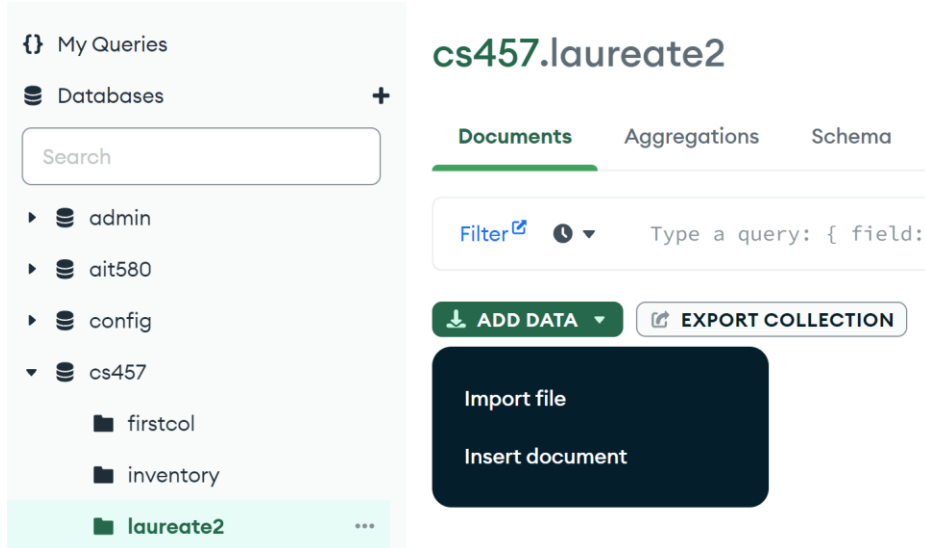

4. Press the + button in front of your database (in this example it is cs457) and create a collection for your dataset.

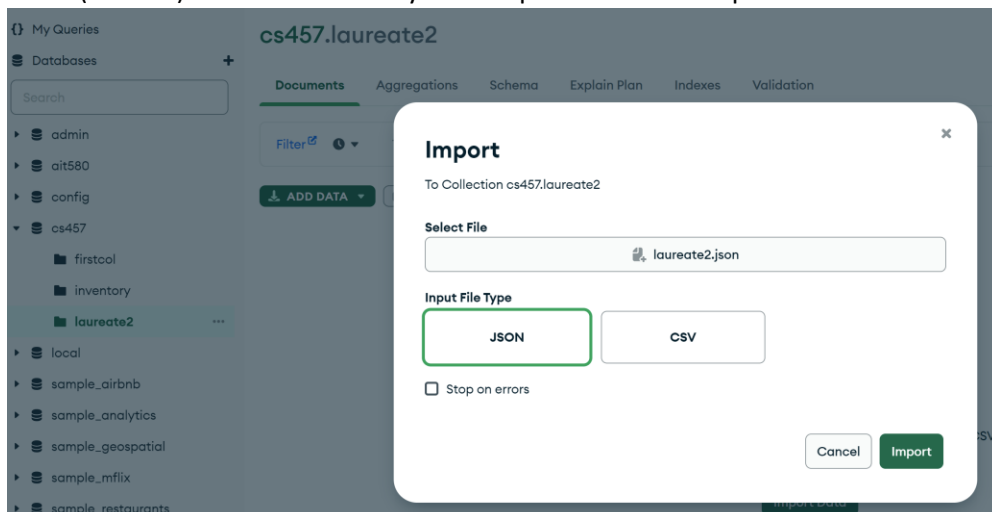

5. Click on the newly created collection and you will see this screen.

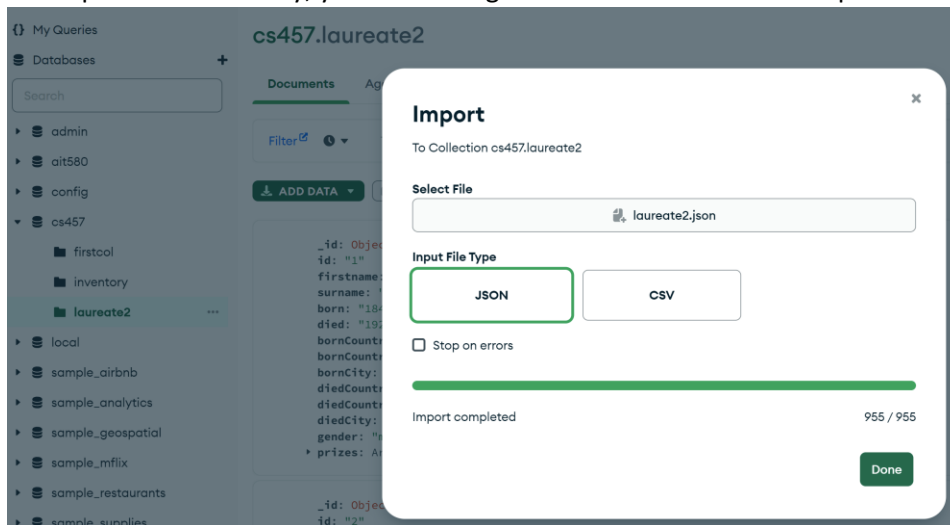

6. Press Add Data and Click on Import File

7. Select(Browse) the dataset file in your computer and click Import

8. If completed successfully, you will see a green bar. Press Done to complete the import process.

9. Go back to your IDE (Studio 3T) and you will see the newly created collection.
